Experience

Poulima Infotech

Nov 2023 – Present

Software Engineer

Remote

- Mentored a 5-member engineering team on API design, data modeling, and performance thinking, driving a culture of continuous measurement and debugging.
- Architected scalable backend services and database schemas for **AstroAvastha** (10k+ users), driving core decisions on normalization, denormalization, and data access patterns.
- Owned end-to-end service performance, setting up dashboards and alerts using **CloudWatch** to monitor key metrics like latency, connection exhaustion, and storage.
- Engineered asynchronous job pipelines using **BullMQ** to resolve lock contention and decouple heavy computation tasks, reducing API response time by **40%**.
- Planned and executed zero-downtime migrations, optimizing complex aggregation pipelines and ensuring secure credential management across AWS infrastructure.

UBK Infotech

May 2023 – Oct 2023

Backend Developer

Kolkata, West Bengal

- Wrote clean, testable backend code for a multi-tenant platform serving **5,000+ users**, managing transactions, concurrency, and data consistency models.
- Analyzed execution plans () to debug and revamp legacy Node.js code, optimizing slow SQL queries and indexing strategies to reduce server load by **30%**.
- Managed connection pooling and efficient resource usage, proactively debugging production issues across the application and database layers to ensure high availability.

Projects

[Topskyll - Code Engine](#) | *Next.js, Node.js, PostgreSQL, Docker*

Live

- Architected a robust **PostgreSQL** database layer for a remote code execution engine, modeling data for correctness, extensibility, and future use cases.
- Designed the backend infrastructure to handle high-throughput automated test-case validation, maintaining strict data integrity and efficient connection pooling.

[AstroAvastha Platform](#) | *React.js, Node.js, TypeScript, AWS*

Live

- Owned the full-stack architecture of a distributed marketplace, managing **AWS** deployments (EC2, S3) and setting up reliable failover mechanisms to handle traffic spikes.
- Integrated payment gateways with strict transactional guarantees, resolving real-world issues like deadlocks and ensuring system atomicity during concurrent operations.

[Telugu Calendar Panchangam](#) | *React Native, SQLite, Node.js*

1M+ Downloads

- Engineered a scalable backend infrastructure driving organic growth to **1 Million+ downloads**, focusing on low-latency data access and end-to-end observability.
- Tuned local **SQLite** database queries and storage behavior from first principles to guarantee sub-100ms load times on resource-constrained devices.

Technical Skills

Backend & APIs: Node.js, Express.js, NestJS, TypeScript, C#, REST API, System Design

Database & Storage: PostgreSQL, MongoDB, SQL Query Optimization, EXPLAIN ANALYZE, Indexing, Connection Pooling, SQLite, Redis

Cloud & Observability: AWS (RDS/Aurora, EC2, S3, Secrets Manager), CloudWatch, Enhanced Monitoring, Zero-downtime Migrations

Architecture & DevOps: Docker, CI/CD (GitHub Actions), Concurrency, Transaction Management, Linux

Certifications

Full Stack Web Development | *Masai School*

Jun 2022 – Apr 2023

- Completed intensive **30-week** military-style coding bootcamp (**1200+ hours**). [\[Certificate\]](#)

Education

Amity University

Bachelor of Computer Applications — Concurrent with Full-time Job

Online
